

What the client pays the cloud provider each month. AnuRupa Matrimony is a light application — one consultant team, a few thousand profiles, traffic in thousands of requests a month rather than millions — so it fits the smallest production-grade tier of either cloud. Both columns buy the same thing.

**Assumptions** — 3,000 profiles · 25 GB media · 32 GB database · ~50,000 requests and under 50 GB outbound a month · one production environment, no standby. **Prices** — pay-as-you-go list rates for **Azure Central India** and **AWS Mumbai (ap-south-1)**, read from each provider's pricing API on 6 October 2026; no reserved-instance discounts applied, which would cut compute by roughly 30–40%. Converted at **₹96 / USD**.

### Monthly running cost

| Component                                      | Microsoft Azure                                                                                                           | ₹ / Month | Amazon Web Services                                                                                                        | ₹ / Month |

**Recommendation — either, with AWS marginally ahead.** At this size the two clouds are within **₹300 a month** of each other — about 9% — and both run the platform on equivalent, production-grade managed services with the same security posture. AWS Mumbai is the slightly cheaper of the two and is the default recommendation; Azure Central India is an equally sound choice if the client already holds an Azure account or a Microsoft agreement. Budget **₹3,200–3,500 a month**, or roughly **₹40,000 a year**.

**Not included** — domain registration (~₹1,000/year), any email or WhatsApp Business API charges, and the ₹2,000/hour maintenance rate quoted separately. **Scaling** — these figures hold to roughly 25,000 profiles and 100 GB of media; past that the database tier grows first, about ₹1,700/month per step. **Caveat** — list prices and the exchange rate move, so treat these as accurate at the date shown rather than as a fixed quotation. The client holds the cloud account and pays the provider directly.
