

What the client pays the cloud provider each month. AnuRupa Matrimony is a light application — one consultant team, a few thousand profiles, traffic in thousands of requests a month rather than millions — so it fits the smallest production-grade tier of either cloud. Both columns buy the same thing.

Assumptions — 3,000 profiles · 25 GB media · 32 GB database · ~50,000 requests and under 50 GB outbound a month · one production environment, no standby.
Prices — pay-as-you-go list rates for **Azure Central India** and **AWS Mumbai (ap-south-1)**, read from each provider's pricing API on 6 October 2026; no reserved-instance discounts applied, which would cut compute by roughly 30–40%. Converted at **₹96 / USD**.

1 Monthly running cost

COMPONENT	MICROSOFT AZURE	₹ / MONTH	AMAZON WEB SERVICES	₹ / MONTH
RUNNING THE APPLICATION				
Application hosting	App Service Basic B1, Linux 1 core · 1.75 GB · ₹1.7278/hr	1,261	App Runner, 1 vCPU / 2 GB \$0.007448/GB-hr + \$0.068096/vCPU-hr + \$1 pipeline	1,160
Database	PostgreSQL Flexible Server B1ms 1 vCore · 2 GB · ₹2.3517/hr	1,717	RDS PostgreSQL db.t4g.micro Single-AZ · \$0.021/hr	1,472
Database storage	Premium SSD, 32 GB ₹12.5746/GB-month	402	gp3, 32 GB \$0.131/GB-month	402
Photo & media storage	Blob Storage Hot LRS, 25 GB ₹1.9198/GB-month	48	S3 Standard, 25 GB \$0.025/GB-month	60
Storage operations	50k writes + 300k reads	39	50k PUT + 300k GET	36
Outbound traffic	Under the 100 GB free allowance free	0	Under the 100 GB free allowance free	0
Monitoring & logs	Azure Monitor, within free allowance	0	CloudWatch, within free tier	0
SECURITY — INCLUDED AT NO EXTRA CHARGE ON BOTH				
TLS certificate	App Service managed certificate issued and renewed automatically	0	AWS Certificate Manager issued and renewed automatically	0
Network DDoS protection	Azure DDoS Infrastructure Protection	0	AWS Shield Standard	0
Encryption, firewall & private storage	Platform-managed keys; Flexible Server firewall with public access off; private blob container, signed URLs only	0	Platform-managed keys; security groups, database not publicly reachable; private S3 bucket, public access blocked	0
Automated backups	7-day retention, within the included allowance ₹9.119/GB beyond	0	7-day retention, within the free allocation \$0.095/GB beyond	0
Secrets store & access control	Key Vault Standard + Entra ID managed identity ₹2.8797 per 10k operations	3	Secrets Manager + IAM roles \$0.40/secret + \$0.05 per 10k calls	43
Total	Azure Central India	₹ 3,470	AWS Mumbai	₹ 3,173

2 Optional: web application firewall at the edge

Neither total includes a WAF. It is not required — the platform enforces its access rules on the server, keeps the database off the public internet and serves photographs only through expiring signed links — but it is the usual next layer, and **it is where the two clouds part company**.

OPTION	WHAT IT GIVES YOU	₹ / MONTH
AWS — CloudFront + WAF Web ACL with 4 managed rule groups \$5 per Web ACL + \$1 per rule group; CloudFront free to 1 TB/month	Managed OWASP rule sets, CDN, rate limiting	864
Azure — Front Door Standard + WAF policy ₹3,359.63 base + ₹479.95 policy	Custom rules only — no managed OWASP rule sets	3,840
Azure — Front Door Premium + WAF with managed rules ₹39,595.63 base + policy + default ruleset	Managed OWASP rule sets, CDN, bot protection	41,995

Azure's managed rule sets are a Front Door **Premium** feature — Microsoft's documentation states that "for Azure Front Door Standard, only custom rules are supported" — so matching AWS's protection on Azure costs roughly **48x more**, and over ten times the rest of the bill.

Recommendation — AWS Mumbai. On the running cost alone the two are within ₹300 a month of each other and either would be a sound choice. The deciding factor is the firewall: a managed OWASP rule set costs **₹864/month on AWS** and **₹41,995/month on Azure**, because Azure only sells managed rules with its Premium edge tier. Budget **₹3,200/month without a WAF**, or **₹4,050/month with one**, on AWS.

Not included — domain registration (~₹1,000/year), any email or WhatsApp Business API charges, and the ₹2,000/hour maintenance rate quoted separately.

Scaling — these figures hold to roughly 25,000 profiles and 100 GB of media; past that the database tier grows first, about ₹1,700/month per step. **Caveat** — list prices and the exchange rate move, so treat these as accurate at the date shown rather than as a fixed quotation. The client holds the cloud account and pays the provider directly.
